

## ■ SUPPORT AND MAINTENANCE SERVICES

With a view to providing customers with a complete service in the field of industrial plant engineering in general and in the various sectors in which it operates in particular, Enercon provides its own specialised labour for installation, maintenance and servicing of plants and mechanical maintenance in general.

Thanks to its dynamic, flexible and diversified experience, Enercon is a useful partner for your company for the following services:

- Maintenance of ecological, sewage treatment and incineration plants
- Hydraulic plant maintenance
- Maintenance of pneumatic plants
- Maintenance of metal structures
- Pipe maintenance
- Maintenance of static equipment such as columns, tanks, exchangers, boilers, furnaces, etc.
- Fire-fighting system maintenance
- Maintenance of thermal plants (heating, air conditioning, refrigeration)
- Pipe washing
- Complete and direct provision of the service with own personnel
- Coordination of third party activities, with full liability for the service
- More

The maintenance services are directly co-ordinated by our technical department:

1. Technical consultancy
2. Maintenance engineering
  - Preparation of maintenance plans
  - Pursuit of alternative and improved solutions
3. Various customised maintenance engineering services
4. Provision of technical documentation
5. Maintenance Budget
6. Programming interventions
7. Coordination of work execution

Enercon srl designs, constructs and builds extraction and filtration plants, industrial hydraulics plants in general, incinerators and special applications (data sheets attached)
